

Space Power And Propulsion Technical Branch (DRG)

Provides mechanical, electrical, and electronic engineering technician support to the Center's space projects in the Space Simulation Test Facilities. Support includes: collaboration with the test engineers and/or research customers to develop the test matrix and test schedule; installation and alignment of the test article and associated hardware; operation of the test facilities; and installation, calibration, and operation of instrumentation and data acquisition systems. As a secondary responsibility, provides engineering technician support to all of the Center's test facilities to augment staffing on a temporary, as-needed basis for the installation, maintenance, modification, operation, and repair of research apparatus.
